

## NIGERIA

## TOTAL/HHI – OFON

### ACCOMMODATION

### TOGETHER WE CONNECT!

The Ofon field is an oil & natural gas field located 65km offshore of the coast of Nigeria. Phase II Ofon development began in February 2012. The project involved installation of 4 new platforms: 2 production platforms, 1 accommodation platform for 124 people and a processing platform. Two of our accommodation vessels were deployed to provide the client with the required POB.

## TOTAL/HYUNDAI HEAVY INDUSTRIES (HHI) – OFON

Over the full year 2014 two multi purpose DP3 Accommodation vessels, Telford 31 (ex Jascon 31) and Telford 25 (ex Jascon 25) were deployed to provide the client with the required POB.

Telford 31 can provide accommodation facilities to approximately 469 personnel. Due to the large quantity of sub-contractors that worked on the platform a Portable Accommodation Block (PAB) was installed on the main deck of Telford 31, which increased the vessels capacity to accommodate up to 597 persons.

Telford 25 joined Telford 31 and both vessels were connected to the Ofon facility by telescopic gangways, adding accommodation capacity for another 355 personnel\*.

The project was successfully completed in 2014 and once again demonstrated the versatility and flexibility of the DP3 fleet to allow the Client to benefit from large accommodation capacities and efficient gangway personnel transfer systems.

On January 7 2015, Total completed the flare out of the Ofon field and the associated gas of the field was being compressed, evacuated to shore and monetized via Nigeria LNG.
