

PRESS RELEASE

Timas Suplindo charters Telford Offshore's multi-purpose construction vessel in Indonesia

Dubai, UAE – 5 November 2018 - Telford Offshore has been awarded a charter party from Indonesian contractor Timas Suplindo for the DP3 multi-purpose offshore construction vessel, Telford 25.

The three months contract, with options to extend, will see Telford 25 support a wide range of services from installation of subsea structures and piles, flexible pipelay, and saturation diving for the TSB Phase 2 Development offshore Indonesia. The vessel, which is under planned dry-dock in Indonesia, will perform her first contract in her new colours for this charter contract with Timas Suplindo.

Headquartered in Dubai, Telford Offshore is an international offshore service provider offering cost-effective construction and project management solutions to the oil & gas industry, with a fleet of four DP3 support vessels.

Mobilisation in Batam, Indonesia, is scheduled for the start late November in preparation for the offshore installation of subsea structures, flexible pipes, umbilicals and spoolpieces. The vessel shall also be fit-out with saturation dive spread for subsea installation and tie-in work.

Telford 25 is one of the Telford Offshore's DP3 fleet of accommodation and construction vessels. She is equipped with an 800t heave compensated main crane, and 1500m² of unobstructed deck space. The vessel can accommodate 355 personnel.

Duncan MacPherson, Telford Offshore Chief Operating Officer, said: "We are very pleased with this contract from Timas Suplindo. Over the course of this project the T25 will demonstrate her versatility by supporting multiple activities such as flexible pipelay, saturation diving, lifting, subsea construction and installation services".

Telford Offshore is adaptable to client requirements and operates in the most challenging environments, delivering safe access to and support of offshore worksites.

Notes to Editors:

Telford Offshore's fleet comprises four modern vessels, all built between 2007 and 2011: Telford 25, Telford 28, Telford 31 and Telford 34. Their DP3 capabilities and permanent walk to work systems allow them to benefit from safe and very high connectivity rates to fixed and mobile production installations, reducing downtime whilst on station. Their multi-purpose capabilities ensure that diverse operations can be undertaken by one single vessel.

Each vessel is able to provide accommodation services, to transport, lift and install subsea or topside components, lay pipe and carry out subsea construction.
