INPEX- ICHTHYS

ACCOMMODATION

Telford Offshore provided accommodation and marine services in support of the Ichthys Venturer FPSO hook-up and commissioning operations for INPEX in the Ichthys field, 450km north of Broome, Western Australia.

INPEX ICHTHYS ACCOMMODATION PROJECT

Telford Offshore utilized the Telford 25, a versatile DP3 accommodation / construction support vessel for the contract awarded by INPEX for the provision of Flotel services for the Ichthys Development Project.

Telford Offshore utilized the Telford 25, a versatile DP3 accommodation / construction support vessel for the contract awarded by INPEX for the provision of Flotel services for the Ichthys Development Project.

Equipped with a specialized “follow target” DP system, the Telford 25 maintained a controlled positional offset from the turret moored FPSO as it weathervaned in 220m water depth. A Marine Aluminum heave compensated gangway positioned at the Telford 25 stern maintained connectivity to the FPSO for the transfer of hook-up and commissioning personnel between the two vessels over the 10-month charter period in the field.

The Telford 25 Australian Safety Case allowed for 418 personnel on board

(POB). The vessel was fit out with Telford owned MLC compliant and ABS certified accommodation, office and recreation space modules tailored to INPEX specific requirements. The flexibility of the modular design allows the Telford 25 POB capacity to be increased to 579.

The vessel was equipped with a helicopter refueling system which was necessary given the distance of the offshore site from the nearest shore-based helicopter refueling location. The vessel also undertook vessel to vessel lifting operations of circa 50 tonne.

Australian marine manning and catering services was also provided by Telford Offshore during the charter period.
